

SAE Standards: Custom Blocks from IHS

The SAE standards Custom Blocks solution from IHS gives you the flexibility to create your own “online subscription” to the J Reports and AMS & AS specifications you need, at a money-saving price. You now can decide which SAE standards to include in your subscription.

Your collection will be automatically updated as the included standards are revised or reconfirmed, giving you the assurance that you will always have access to the latest versions of your standards. As with any IHS “online subscription,” you can receive email notifications alerting you that standards in the collection have been updated.

Having your Custom Block of SAE standards included in your IHS standards subscription along with documents from 400+ other standards organizations means less training and seamless linking between all your standards through a single browser interface.

This solution is ideal for 1-2 sites with 1 to 20 users each, and requiring up to 50 SAE J Reports or AMS & AS standards.

A cost-effective and convenient solution for accessing the SAE Ground Vehicle “J” Reports and Aerospace (AS) and Aerospace Material Specifications (AMS) you need through IHS.

Benefits

- **Cost Effective** – Costs less than purchasing individual standards via retail.
- **Custom Solution** – You select the standards included in your Custom Block subscription.
- **Convenience** – 24/7 access to standards in your Custom Block via your regular subscription to IHS Standards Expert or Intra/Spex, with no file-locking DRM software.
- **Currency** – Standards in your Custom Block are updated automatically for the term of your subscription.
- **Comprehensive** – Select from the full SAE collection of more than 2,400 ground vehicle standards and 8,000+ Aerospace standards, specification and reports, including SAE AS, AMS, AIR, and ARP.

How It Works

Collections are available in predefined Custom Block sizes:

- Up to 10 reports/standards
- Up to 15
- Up to 25
- Up to 35
- Up to 50

Pricing is predefined based on number of standards in the Custom Block and number of potential users (1, 2-10, 11-20 users, with a maximum of 20 users). Pricing is for one site only.

Added Value

By taking advantage of the new Custom Blocks solution from IHS, you not only gain access to the latest standards, you also can take advantage of all the powerful management tools in IHS Standards Expert and Intra/Spex:

- **Single-source access** for all your standards needs, including documents from ASTM, IEC, AIA/NAS, ASME, API, ISO, GM, Ford, and more than 350 additional standards development organizations.
- **Fast search and study**, with advanced filters and full-text searching, to find the standards you need quickly.
- **Automatic monitoring** of frequently used standards, with user-defined e-mail alerts, so you are always using the most up-to-date version of critical standards.
- **Shared Access** to common standards across project teams, with user-created Watch Lists to alert team members to revisions.
- **Enterprise-wide standards platform**, ensuring consistent process and standards usage across your organization, while requiring less training.

About SAE Standards from IHS

The standards, technical papers and journals published by SAE International (formerly known as the Society of Automotive Engineers) are used daily by engineers, R&D, manufacturers, QA/QC, maintenance, and testing personnel in the automotive, aerospace, off-highway, government, and engineering academia fields.

SAE standards contain detailed production and interoperability guidelines; clarify legal and regulatory grey areas; condense product development cycles; ensure consistency and high quality in manufacturing; and lead the way to maximum performance.

SAE technical papers and new journals present leading-edge engineering, R&D, and technology developments from events hosted around the globe, covering the latest advances from the world's leaders in self-propelled vehicles. These peer-reviewed articles provide in-depth information that is supported by test data and validated simulation for real-world applications of technology.

IHS is the most comprehensive source for obtaining SAE's critical technical information. Only IHS can provide immediate internet access to SAE standards in PDF along with other industry standards from a single platform.

IHS has the flexibility to deliver any configuration of SAE technical information you require – from individual documents for a two-person sales office to enterprise-wide standards collections or any combination in between.
